

Motorized

Retractable

Acoustically transparent

New : our in-ceiling screen is now tensioned and available with an acoustically transparent fabric !

With manufacturing quality on par with Lumene's screens, this tensioned and acoustically transparent version of the old Showplace Premium screen uses a high-end woven canvas for impeccable sound and image results. Featuring the same specifications as its predecessor, this tensioned screen includes a high quality acoustic and elastic canvas. Its exclusive technology provides a perfect image, pronounced contrast, as well as excellent acoustic transparency. This canvas will allow you to place speakers behind the screen, just like in a true cinema. It guarantees linear frequency response with no compensation.

Note : a very slight phenomenon of luminous halo or moiré effect on the texts (especially subtitles) may be created if the screen is positioned too close to the wall. This is due to the reverberation of the light on the wall behind the screen.

Built-in remote control system

Home automation

SPECIFICATIONS

Screen material

High quality LUMENE screen material
Woven fabric
Ultra white projection surface
Optimal acoustic behavior : almost nil diffraction, flat frequency response, no equalization needed
Gain 0.8
Directivity 150°
No shine point
Treatments : anti-yellowing, anti-mold
Black borders

Case

Aluminium
In-ceiling mounting
Hook for hanging installation from ceiling

Motor

Simple, reliable and quiet tubular motor

Control system

RS232 for home automation
Remote control with fine adjustment system (batteries provided)
Built-in IR remote control system
Manual switch (Up, Stop, Down)

Warranty

2 years

DETAILS

Installation

The acoustically transparent fabric is not totally opaque. We therefore suggest you to place it before a dark background. The speakers should ideally be installed so that the tweeter drivers are placed in the middle of the screen (or slightly above if there are several ranges of seats).

Technology

Acoustic is different from standard perforated or micro perforated PVC fabrics. Its specific structure allows a crossing of all the frequencies with no diffraction. As a result, the frequency response is linear, lossless in the high frequencies and the signal is much more precise than with usual screen materials.
